

# Underground Ecological Islands

Make the right choice, safeguarding the planet.

In a reality where the pollution problem is on the agenda, and the need to make separate waste collection is growing, the **BSP engineering** tries to give its contribution to protecting the environment, specifically in the case of poisoning of the soil and groundwater, through the creation of special ecological Islands.

The company's project involves the completion of a lifting platform with usable roof, where above it are placed the bins for differentiated and buried in the area, which comes to the surface only when called, you locate other containers that will be connected to those above.

The **BSP engineering** is committed to the implementation and dissemination of ecological Islands, current and future solution to emergency waste issue.
